

SCOTT DUNN'S EQUINE CLINIC

Please contact the practice to discuss your requirements on 01344 426066.

If you are thinking of sending your mare to us this year, please **book early** as spaces are limited. If you are planning on foaling down at home, please ask for our foaling information sheet and ensure you are fully prepared.

Pregnancy Timeline

Month	1	2	3	4	5	6	7	8	9	10	11
					EHV		EHV		EHV		
								Rota	Rota	Rota	Tetanus
	Normal feed regime							Mare and youngstock feed			
											Wormer

- From the start of the pregnancy to the 7th month included, feed a normal food regime.
- From the 8th month onwards, gradually introduce 'mare and young stock' feed, following the manufacture recommendations.
- Equine Herpes Virus vaccination 5, 7 and 9 months of the pregnancy to protect against abortion.
- Rotavirus vaccination 8, 9 and 10 months of pregnancy (to be discussed if applicable).
- Flu and tetanus vaccination as required. Tetanus vaccine on the last month of the pregnancy (2-3 weeks prior to due date).
- Worming programme as normal during the pregnancy. To be wormed with ivermectin within 48 hours of foaling.

Please contact us when your mare has foaled for further advice.

SCOTT DUNN'S EQUINE CLINIC

Reproduction Services

We are a BEVA approved centre for Artificial Insemination (AI) with fresh, chilled and frozen semen. AI enables our clients to choose a stallion from anywhere in the world and eliminates the risks associated with natural cover.

AI with chilled semen has pregnancy success rates comparable to natural cover at approximately 85%. Frozen semen collection and processing has improved dramatically over the past 5 years and success rates have increased accordingly.

- BEVA Approved centre for AI
- Reproduction packages: Fresh, Chilled and Frozen semen (see opposite)
- Semen Collection: (At the hospital), training with 'dummy' mare not included
- Frozen semen storage: (0-20 doses) Courier fees are the responsibility of the mare's owner
- Pre-screening CEM swabs and EVA/EIA bloods and pre-breeding examination: (Prices dependent on lab)

Please speak to our Stud vet for prices

We offer several reproductive packages to suit your requirements which are outlined opposite. We offer these services at your yard or whilst boarding at our clinic.

All mares coming in to the clinic will require a routine health check, involving a blood test for Strangles, clitoral/cervical swab for CEM and we recommend blood tests for EIA & EVA within the HBLB AI guidelines.

We will also carry out an ultrasound scan of your mare at this point to ensure there are no abnormalities associated with her reproductive tract and to assess the mares reproductive status.

SCOTT DUNN'S EQUINE CLINIC

Reproduction Packages

Chilled & Fresh Semen

Frozen Semen (at the hospital)

Included in packages:

SCOTT DUNN'S EQUINE CLINIC

Foaling Down Package

We offer an on-site professionally monitored foaling service. For a fixed price your mare will be able to stay with us for the final stages of her pregnancy and will be monitored by our stud team 24 hours a day.

- Professional onsite monitored foaling service. We advise the mare should arrive 3-4 weeks before her due date, to guarantee adequate colostrum composition for the new environment
- 24h surveillance
- Fully equipped foaling boxes
- Foaling attended by a qualified and experienced stud vet
- Detailed new born examination (Fleet enema included in package)
- IgG test (Glutaraldehyde coagulation test) at 24hours old. To assess colostrum transfer/immunity
- Plasma transfusion
- Initial limb deformity assessment and planned treatment
